Ques:- Given a sorted integer array A & an integer k, find any pair (i, j) s.t.,
 $A[i] + A[j] = k$ & $i \neq j$,

S.C $\rightarrow O(1)$.

A = $\begin{matrix} 0 & 1 & 2 & 3 & 4 & 5 & 6 \\ [-5, & -2, & 1, & 8, & 10, & 12, & 15] \end{matrix}$ $k = \underline{11}$.

Sophie is a nutritionist who is obsessed with healthy eating. She has a list **A** of size **N** foods with their respective nutritional values in the array A. Sophie gives Bob a query array **B** of size **Q**, where in each query she gives him a range from L to R and asks him to find the count of foods with nutritional value strictly greater than **10** in the subarray A[L], A[L+1], ... A[R]. Bob is busy with building a new gym, so he asks you to find the answer to all Sophie's queries.

NOTE: Queries in array B have 1-based indexing, which means that we will have to subtract 1 from the given range while getting answer
